

ONE HEALTH

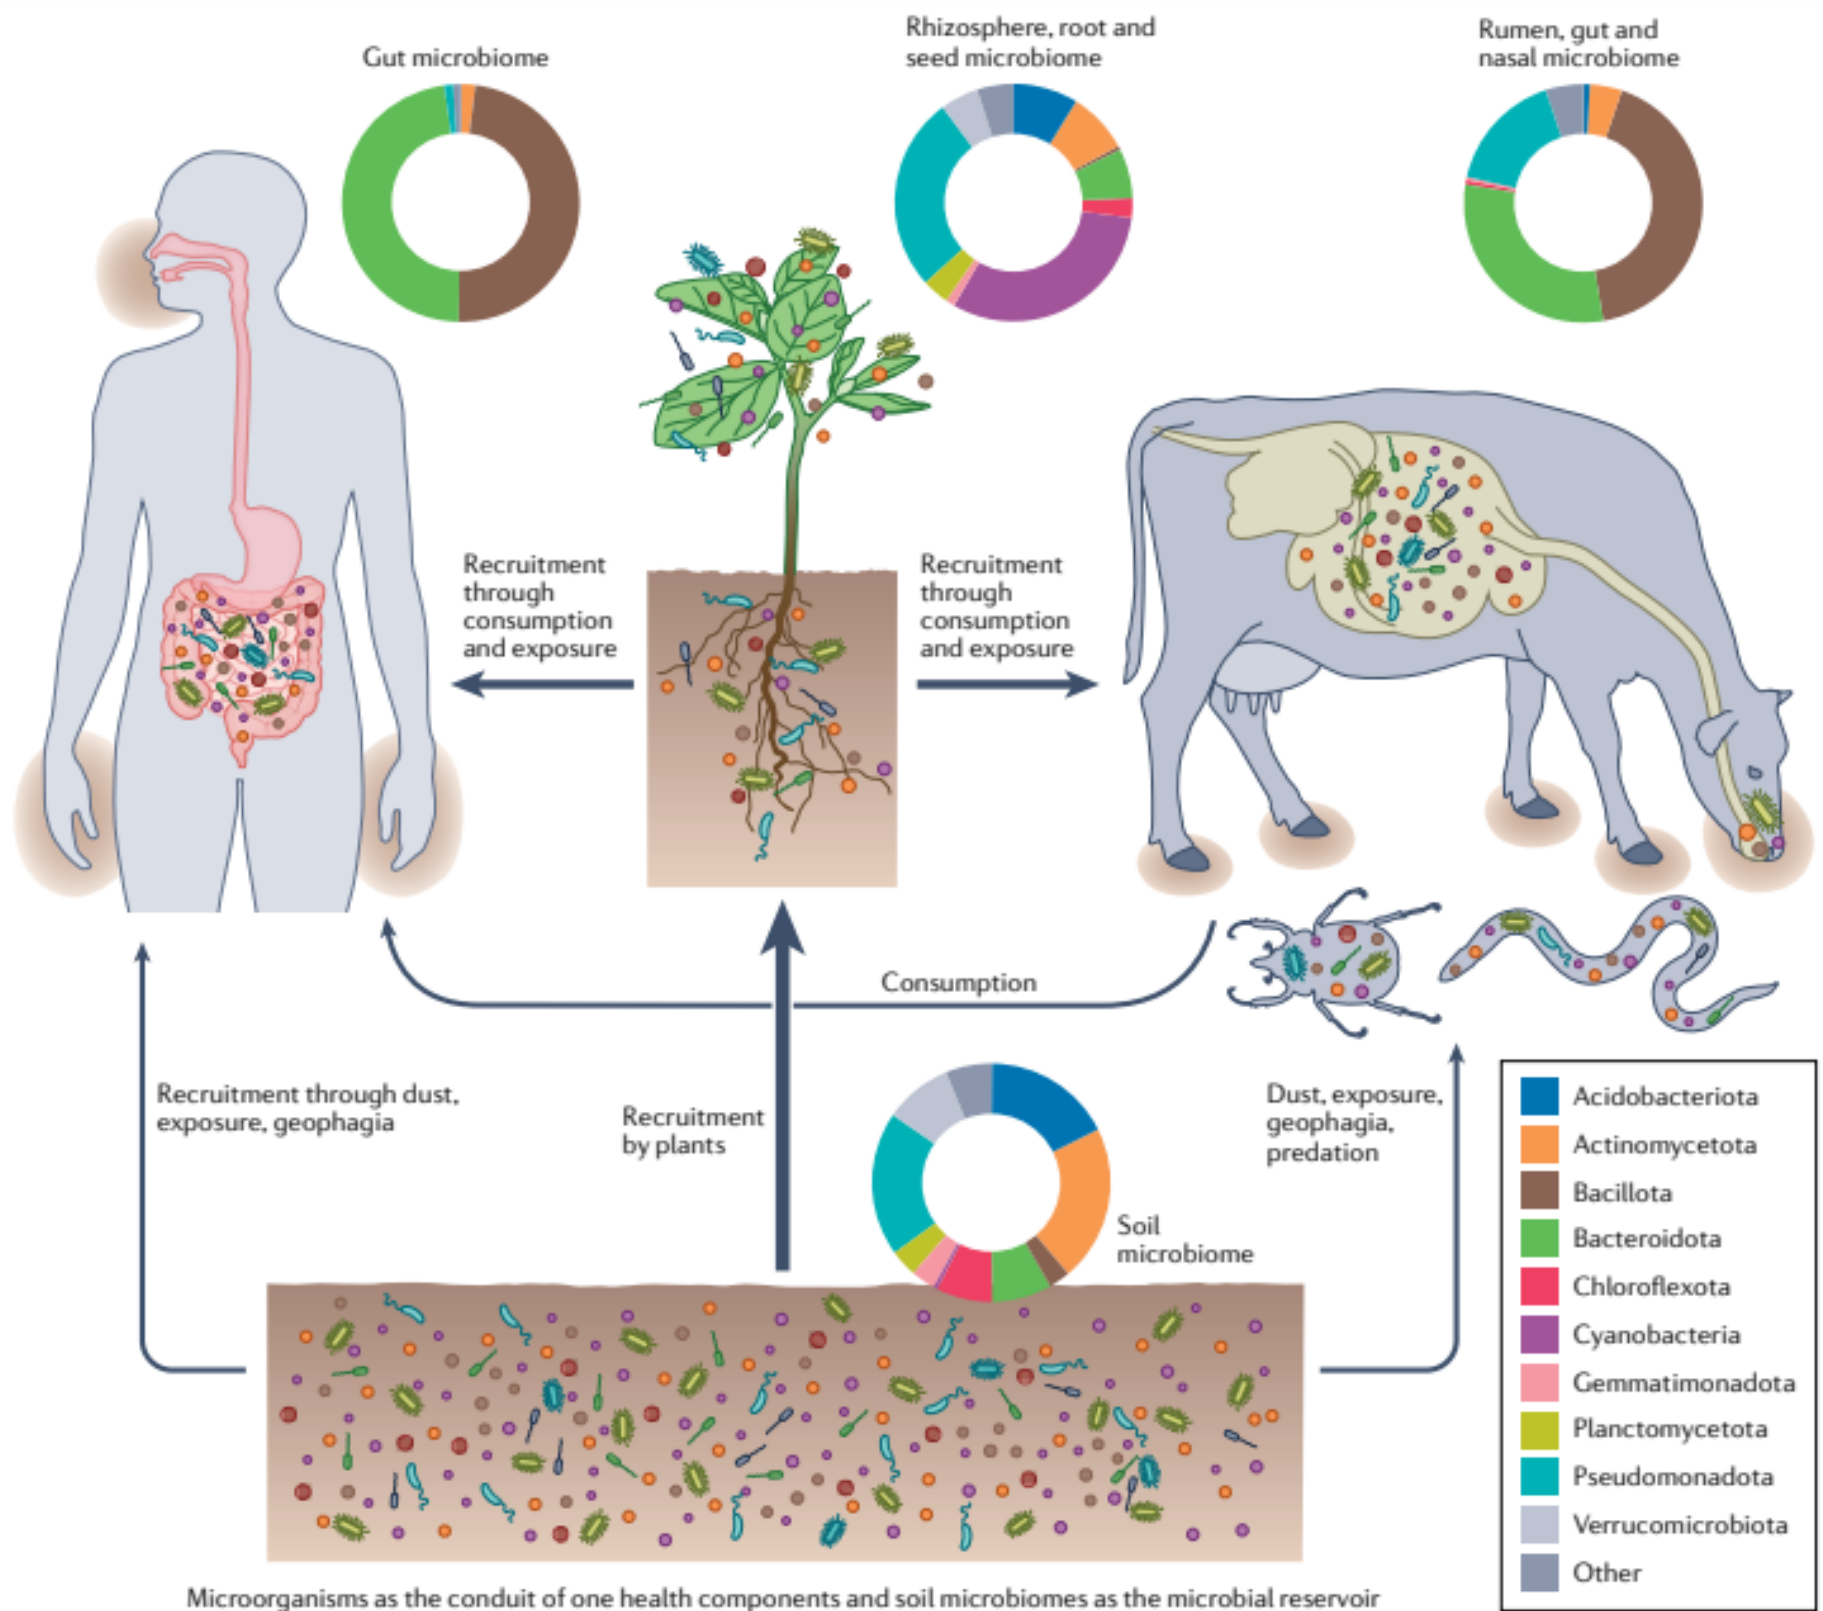

One Health:

The interconnectivity between the health of animals, plants, environments and humans.

Microorganisms link soil, plant, animal and human health, and **microbial communities** connect the different ecosystems.

Microbial communities of different organisms are **interconnected** and form a circular loop

Soil harbours the most diverse and complex **microbiome** on Earth, and thus is the foundation of One health.

Soil microbial communities can have direct and indirect influences on: **nutrient cycling, organic matter dynamics, soil structure, carbon transformations and sequestration.**

Diets play a significant role in shaping the **microbiome** composition of both **humans and animals.**

Soil microbiomes have a demonstrable impact on plants and animals consumed by humans, and by doing so, **soils indirectly influence human health.**

Soil is the foundation of one health

We are on a mission to spread
awareness amongst
health professionals about the
connexion between soil-human health.

Join us in our mission!
